

Postdoctoral Position in Behavioral Medicine (Stress & Addiction Research)

The University of Minnesota Medical School (Duluth and Minneapolis) is searching for a Postdoctoral Fellow with strong research interest in behavioral medicine (stress and addiction research). The candidate will participate in an active NIH and NSF biobehavioral research program (Director, Mustafa al'Absi, Professor). Our research focuses on stress psychobiology, addiction, and global health. The candidate will have access to a rich clinical research environment within the NIH funded CTSI and other centers. Abundant opportunities to analyze existing data sets and publish in peer reviewed journals.

Requirements include: As of the beginning date of the appointment to this position, a Ph.D., M.D. or comparable doctoral degree from an accredited domestic or foreign institution. *Preferred Qualifications include:* evidence of research excellence as demonstrated by publications and/or awards recognizing scientific excellence; good/excellent communication skills as demonstrated by clarity of presentation; training in biological or clinical psychology; and experience in human psychophysiological and psychobiological research.

Interested individuals should apply online at <https://humanresources.umn.edu/content/find-job> (Search posting number 348821. Applicants should also submit a personal statement explaining why you are interested in this position, background and research experience, and career plans after the postdoctoral fellowship.

For information about this position, please contact Dr. Mustafa al'Absi at malabsi@umn.edu

The University of Minnesota is an equal opportunity educator and employer.
